

# MYZOO JR. CONSERVATION

## Positive Actions vs Negative Actions:

Check the positive action that helps you save animals and their habitats!

Human actions impact animals and their habitats every day. Learn how you can help right at home by using positive actions!

What is conservation? Conservation is the protection of all things in nature. This includes keeping habitats clean and being a good steward to the environment. If we protect the natural world, all of the things we love – like forests and animals – will be around for many years to come.

How can you help? You can take positive actions at home, like those shown here, to make a difference for conservation. Getting the word out about conservation and telling your friends and family can have a big impact too!
